# Element

Designed by Adam Goodrum

A striking, architectural-inspired fire pit constructed of three interlocking blades of cantilevered mild steel. As exposed to direct fire, Element will continually mature and its coating weather to give a unique rusted finish. Carefully considered, Element can be disassembled and compactly stored.

**Dimensions**  
800mm x 725mm x 200mm H  
(31.5in. x 28.5in. x 7.75in. H)

**Weight**  
20Kg  
(44Lb)

**Materials**  
4mm-thick mild steel.

**Finishes**  
Black Oxide.  
When exposed to direct fire, Element's Black Oxide finish will gradually mature and its coating weather with age, delivering a unique rusted finish, grey in colour.

**Extra Notes**  
Due to rust and the very nature of Element, heat-resistant ground surfaces such as gravel, sand or earth are recommended for use and placement. Wood surfaces or grass, which may burn or singe, are strongly advised against. Tiled or concrete surfaces also run the risk of staining.

**Care, Maintenance & Warranty**  
Five-year structural warranty.

**Safety**  
Element must fully cool down before any attempt is made to touch or move the product. Care must also be taken when lifting Element due to its weight.

**Suitable Conditions**

Made by Tait in Australia
