Café Height

“

People are gravitating towards places with a hand-made comfortable feel. SPACES CREATED BY INDIVIDUALS, NOT COMMITTEES. The controlled, corporate atmosphere of the past no longer prevails in today's more relaxed and welcoming environments.

Personal desks are increasingly being superseded by 'light touch' communal furniture offering greater flexibility and A SMALLER OVERALL FOOTPRINT. With collaborative team tables playing a key role in today's Smartworking® environments, the expansion of the popular Cubb range of chairs and tables into this area was a natural progression.

The laid-back, informal attitude that originally made Cubb so popular translates perfectly into team tabling at both work and café height. As with the original range, these tables are easy to customise, offering a choice of timber stains, metal finishes and work surfaces.

“

The **DESIGN PERSONALITY** of the first range of Cubb seating and tables was intrinsic to its success. We knew that this gave Cubb additional scope and potential, which has now been realised with this extensive range of team tables.

”

The team tables reflect Cubb's trademark

architectural simplicity and structural refinement,

with every component having been meticulously designed and tested. They come with a range of power and lighting options, with cables running seamlessly up the legs and connecting beneath the work surface.

Each height of table offers a **different way to work and interact with others in the collaborative workspace**, and can be configured for four, six or twelve people. This brings a refreshing vitality and flexibility to team environments.

Structurally smart components add to the range's architectural refinement, and can be exploited by designers to create individual pieces of great character that perfectly match their project criteria.

“

The office is migrating from a hierarchical system-focused environment to a more **CASUAL AND DIVERSE** network space.
